

WHAT IS SCIENCE4FUN ABOUT?

Science4Fun is innovative in developing new model of training for the teaching of science that emphasises real world application and practical experiments. Science4Fun is enabling partners to meet new needs and demands of students and trainers who are preparing for a technical and scientific future.

The focus of the project is to resolve the problem of the willingness of young people to become more engaged with science. Currently disengagement exacerbates the issues, moreover the output of our education systems do not correlate well with the expectations of the labour market. One of the steps is also promoting new methodological approach in order to increase motivation of students. It encourages an interesting way of teaching science, specifically in aspects of physics, chemistry, geology, biology, astronomy and environmental resources.

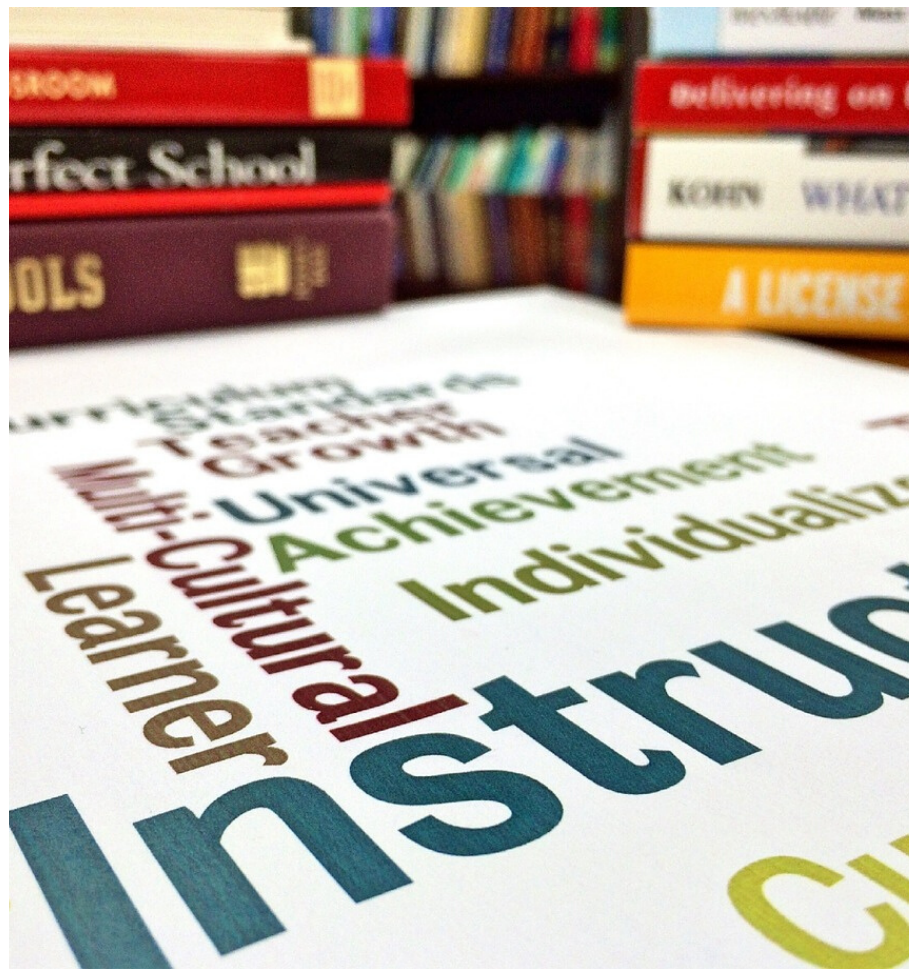

Co-funded by the
Erasmus+ Programme
of the European Union

STAFF TRAINING, JULY 2019:

- Understanding the science taxonomy data model of the project and how the questionnaires cover that taxonomy in the baseline test.
- Configuring the system to include my class in the baseline test the first time and the following year.
- Running the baseline test and analyzing the results.
- How to feed the guidance system and the teachers in-service, following the taxonomy (indexing resources) to propose relevant resources depending on the Baseline Test results.
- How to work with the project resources and create them.

PARTNERS:

- Pro Work (Netherlands) - coordinator. Foundation Knowledge Center PRO WORK promotes the (career) development of people with a (significant) distance to the labour market and the society as a whole.
- Foundation Siglo22 (Spain) - develops programs and projects related to learning, improves the conditions of daily life for people with problems: unemployment, gender differences, etc.
- National Training Centre (Bulgaria) is a privately owned training organisation established in 1999. It is actively engaged in research and development of training innovation.
- JKVG (Belgium) helps young people with a distance to the labour market searching for a job or training. JKVG vzw has built up expertise in developing and organising trainings in the area of disability and employment on an individual or school-level.
- Euroface Consulting (Czech Republic) is a consulting and training centre fostering links between the education and production sectors, regionally and with some international outreach.
- Ljudska univerza Velenje (Slovenia) is public non-profit adult education institution. LUV takes an active part in regional community by improving the educational structure of the population.
- SPI (Portugal) is a consulting firm, well positioned as a facilitator of innovation with an emphasis on Science and Technology and Territorial Development.
- AHE (Poland) - University of Humanities and Economics in Lodz was established in 1993. It is one of the largest non-public institutions of higher education in Poland.
- UAM (Spain) - The Autonomous University of Madrid is a Spanish public university established in 1968. The UAM is divided into eight faculties and superior schools.
